A banker’s bond: When less is more

By Sarah Kong, DDS

This banking executive was recently chosen as the official cosmetic dentist for the Georgia and South Carolina United States Pageant contestants. Morton said he is excited to help contribute to the grace and beauty of the event by making every smile as beautiful as it can be.

The United States Beauty Pageant provides a great opportunity for women from all over the country to showcase their talent and beauty on a national stage. The competition brings together representatives from every state to compete in a wide range of areas.

These young women strive to be the best they can be in all aspects of their lives, always reaching for excellence in education, community service, and peer leadership. Recently, Courtney Jue of Georgia was named 2009 Teen South Carolina United States and Miss Junior Teen Georgia United States, Miss Junior Teen Georgia United States, Miss Teen South Carolina United States, Miss Teen South Carolina United States, and Miss Junior Teen Georgia United States and Miss Junior Teen South Carolina United States.

Morton and the entire Mint 32 team have been providing professional dental treatment and personal care to residents of the greater Atlanta area for years.

Yet patients do not have to be beauty pageant contestants. Mint 32 provides professional care and personal service to every patient.

"Any smile can be effectively treated with the wide range of cosmetic procedures offered," Morton said.

"Bonding can quickly repair damaged or misaligned teeth, porcelain veneers can cover unsightly gaps or stains, and professional whitening procedures can brighten any smile."
Multiple images were taken of the various mockup options and e-mailed to the patient, along with multiple treatment plan options. After careful consideration, the patient opted to do the resin veneers on teeth #7 through #10 as well as the gumlift.

It was because of the mockup and photographs that the patient realized the value of the gumlift in creating a more ideal smile. He wanted to think about the resin veneers for the premolars and possibly have them done in the future.

The procedure

The patient presented for the bonding appointment with his teeth whitened and ready to go. We began by placing topical anesthetic before anesthetizing teeth #7 through #10 with The Wand. Subsequent injections of Lidocaine were placed around the gumline of teeth #7 through #10 before electrosurgery of the gums.

Using Bident, a bipolar electrosurgery unit, the gingiva around #8 was contoured to ideal proportions (Fig. 7). Once the gingiva was removed, it was discovered that the underlying bone had grown into the cervical divert of #8, right on top to the enamel. It was then decided that crown lengthening would be indicated, so a small, round diamond bur was used to contour the bone to match the ideal gumline.

We proceeded to contour the gin-
Sarah Kong, DDS, graduated from Baylor College of Dentistry, where she served as a professor in restorative dentistry. She focuses on preventive and restorative dentistry, transitionals, anesthesia and periodontal care. Kong is an active member of numerous professional organizations, including the American Dental Association, the Academy of General Dentistry, the American Academy of Cosmetic Dentistry, the Texas Dental Association and the Dallas County Dental Society.

About the author

giva on the mesials of #7 and #10 and to create symmetry of #9 with that of tooth #8 (Fig. 8).

The Bident unit allowed for gentle, clean coagulation in a wet field. There was no grounding needed, and because the unit is meant to be used with water, there was no tissue char- ring or shrinkage.

A more effective, more precise and safer result was achieved with essentially no post-op bleeding — a perfect scenario for bonding teeth immediately with no worries of a contaminated field.

The teeth were now ready to be bonded. They were carefully cleaned with pumice to remove any surface debris and stains. Metal strips were placed interproximally to isolate each tooth.

Then they were microetched with aluminum oxide to allow for better mechanical retention. Thirty-seven percent phosphoric etch was placed and rinsed before the application of a bonding agent, such as OptiBond Solo Plus Unidose.

Tooth #8 was bonded first using various layers of composite, starting with a microhybrid (Premise) and ending with a microfilled composite (Renamel). This tooth was contoured and polished with a series of polishing discs (Shofu) before proceeding so the next tooth (#9) could be matched to this tooth without being bonded to it.

Teeth #7, #9 and #10 were bonded in a similar fashion with various shades to create a more natural, graded appearance.

As before, each tooth was polished before bonding the next one. Final contouring and polishing were achieved and a high shine was gained with a Twist-2-It and polishing paste.

In about two hours, the patient had a new smile! Even the gumline looked amazing immediately post-op with no bleeding (Fig. 9).

Gentle Gel, an aloe vera and herbal-based gel, was placed along the gumline and given to the patient to apply at home to help soothe the gums and provide for quicker healing.

The patient was amazed and in love with his new smile, even immediately post-op.

When he returned for his two-week follow-up visit, the gums were ideally contoured and the resin veneers looked wonderful, and the patient said they felt wonderful, too (Fig. 10).

No polishing was needed, so we just did another high shine polish to make them sparkle. Post-op photographs were taken and the patient loved the results (Fig. 11).

He also mentioned that he had no post-op pain originally and the gums looked and felt better in just a couple days after the bonding appointment.

Overall, the patient was ecstatic about the dramatic improvement, especially how contouring the gumline contributed immensely to the final cosmetic result.

He also loved the fact that orthodontics was avoided and a beautiful smile was achieved in a single bonding appointment with a minimally invasive approach — less is more.

Now he is already thinking about and looking forward to his next dental venture — resin veneers for his premolars.
