Figs. 8a, b: The extraoral treatment results. The sagittal, vertical and transverse were corrected.

Fig. 8c, d: Change in the oral profile: pre-op and post-op.

Fig. 9: The cephalometric image after conclusion of treatment shows a harmonious ratio between the skeletal structures, as well in the sagittal axis and the vertical axis, and harmonization in the soft-tissue profile between the upper and lower face.

Fig. 10: Orthopantomogram after conclusion of orthodontic treatment and before prosthetic care.

**BeautiBond™**

One Adhesive: Two Powerful Monomers

**The Science Behind the Bond.**

- Unique dual adhesive monomers deliver equal bond strength to enamel and dentin
- Only 5µm film thickness
- No HEMA

Providing convenience and efficacy in a single adhesive, BeautiBond has a distinct advantage over other seventh-generation adhesives. With bond strengths similar to leading fifth-generation alternatives, BeautiBond is the one-step, all-in-one adhesive for a wide range of clinical indications. Its dual adhesive monomers enable predictable long-term bonding to both enamel AND dentin.
