Shofu will be demonstrating its revolutionary product BEAUTIFIL Flow Plus during the Academy of General Dentistry Annual Meeting at booth No. 319 this year. The injectable injectable hybrid restorative is now available in three new shades — B1, B2, and C2 in both viscosities, giving dentists even more esthetic treatment options at their fingertips.

The product combines mechanical properties that rival leading hybrids, with the superior adaptation that can be achieved only with flowables. Approved for all indications, BEAUTIFIL Flow Plus achieves better adaptation, with a stronger mechanical bond strength compared with leading hybrids on the market. In a Florida study found that restorations containing S-PRG filler showed no failures, no secondary caries and no post-op sensitivity. As published in JADA, a University of Florida study found that restorations containing S-PRG filler material, providing sustained preventive benefits over the life of the restoration.

Many competitive restoratives release fluoride initially, but deplete their charge within a matter of weeks. With S-PRG technology, fluoride-releasing products, such as toothpaste and mouthwash, recharge the filler material, providing sustained preventive benefits over the life of the restoration.

Numerous independent clinical studies show S-PRG fillers to display biomimetic properties that help protect the restoration and surrounding tooth structure from harmful bacteria. Studies on BEAUTIFIL Flow Plus’s sister product, BEAUTIFIL II, a hybrid restorative, highlight these results. As published in JADA, a University of Florida study found that restorations containing S-PRG filler showed no failures, no secondary caries and no post-op sensitivity during an eight-year period. A 13-year recall of these patients is underway.

Quality and durability

For decades, Shofu’s “Brownies,” “Greenie” and other polishers have been synonymous with quality and durability in dentistry. While many companies would be complacent as the “go-to” polishing company, Shofu has been on a mission to change dentistry for the better with innovative chemical restoratives such as BEAUTIFIL Flow Plus. Exceptional strength, handling and unique bioactive filler technology make it a product worth seeing for yourself!

Coming soon: pit-and-fissure sealant

Building on the GIOMER line of products, and coming soon from Shofu, is BeautiSealant Pit and Fissure Sealant. BeautiSealant is a tooth-colored, fluoride-recharging, pit-and-fissure sealant that reduces treatment time by completely eliminating the need for phosphoric acid etch and rinse steps. Using an advanced, self-etching primer, BeautiSealant is gentle on teeth, yet delivers superior shear and tensile bond strength compared with leading phosphoric acid etched systems.

When Expert Dental CE says it is international, it means it. With 25 percent of its course scholars from outside of the United States and past course takers from countries such as India, Spain and Egypt, Expert Dental CE walks its international talk.

“We are not internationally oriented because it is trendy, but because it allows us to bring to our customers, in the United States and elsewhere, the best educators we can find, wherever they may be,” says Bill Martin, managing director and chief operating officer of Expert Dental CE.

As for whether this international focus also translates into serving dentists worldwide, Martin said: “We have found that dental professionals from around the world, particularly in developing countries, are searching for high-quality C.E. that is independent from commercial sponsorship, focused exclusively on the teaching of practical and sustainable skills, and that includes highly-skilled educators from the United States and beyond, well-known or not. That fits nicely with the Expert Dental CE approach and mission.”

Below is a list of some of Expert Dental CE’s international educators and their courses:

- Peter Cathro (New Zealand): “Instrumentation: The Science and Art” and “Solutions, Energization & Delivery Systems.”
- Markus Troeltzsch and Matthias Troeltzsch (Germany): “Successful Treatment of the Diabetic Patient” and “Management of Pregnant Patients in the Daily Office.”
- Catalina Mendez (Colombia): “Obturation: Basis, Objectives and Techniques.”
- Geoffrey Heithersay (Australia): “Endodontics and Trauma Management in the Age of Implants.”
- Ahmed Hashem (Egypt): “Perforations: The Endodontic Dilemma.”
- Stefan Fickl (Germany): “Management of the Extraction Site.”
- Federico Brugnami and Alfonso Calizzio (Italy): “Buccal Plate Preservation: A Predictable Solution to Anterior Aesthetic Management.”

To view more information about the scholars above or their courses—or to explore Expert Dental CE’s 110-plus-hour course library—you can visit www.expertdentalce.com.

Lasers 4 Dentistry™

LIGHTWALKER AT™
Erbium & Nd:YAG PHAST™ PIPS™ Laser Endo Dual Wavelength Perio Protocol

The Endo, Perio, Soft & Hard Tissue Laser

LIGHTWALKER AT, A CLASS OF ITS OWN, NOTHING COMPARES:

20 Watt Er:YAG Hard & Soft Tissue = Faster Cutting
15 Watt Nd:YAG = Proven Perio Wavelength
QSP & VSP Technology = Faster More Precise & Comfortable Procedures
50μs Er:YAG Pulse Duration = Fewer Shots & Less Anesthesia
OPTOflex Articulated Arm Delivery System = Enhanced Efficiency & Reliability
Xrunner™ Scanner Ready
Options for Snoring, Facial Aesthetics and Dermatological Procedures
Internal Air Compressor, Eliminating External Airlines
Optional Green High Visibility Aiming Beam

The Lightwalker Will Change Your Practice, Call Today

AGD - Nashville, 27-29 June, Booth #919
California Dental Association - San Francisco, 15-17 Aug
Ohio Dental Association - Columbus, 19-22 Sep, Booth #730
AAP Perio Meeting - Philadelphia, 28 Sept-Oct-1, Booth #110
ADA - New Orleans, 31 Oct -2 Nov
Greater New York Meeting, 1-4 Dec

Aribex adds a color, upgrades features on NOMAD Pro 2

Aribex, manufacturer of the newly released NOMAD Pro 2 handheld X-ray system, has introduced a new color option, black with gray trim, of the NOMAD Pro 2 into the U.S. dental and veterinary markets. The traditional white with light blue trim Pro 2 model will continue to be available, and both models can be purchased from most major dental equipment dealers.

"Dental offices are adding more color and variety to their practices," said Ken Kaufman, general manager of Aribex. "The NOMAD Pro 2 is the future of intraoral dental radiography, and, as such, our customers deserve an additional sleek choice of color to best match the décor of their practices. Although the addition of the black model is new, the acceptance of handheld, battery-powered, untethered X-ray is not," Kaufman said. "Upping a market void of significant improvements for decades, the NOMAD is now preferred over traditional wall-mounted intraoral X-ray machines. It is more economical, improves workflow, reduces FMX time and just flat-out makes sense."

The Pro 2 features a newly designed charging cradle, an upgraded communication system using infrared technology, an increased scratch- and moisture-resistant screen and several other improvements to electrical and industrial components. According to company officials, the Pro 2 is not a completely new device, primarily offering superior battery performance and improved reliability and durability when compared to earlier versions.

New from DENTSPLY Caulk: Palodent Plus EZ Coat Matrices

Palodent® Plus, DENTSPLY Caulk’s newest sectional matrix system, is designed to make contact creation easier and more predictable by utilizing optimized ring, band and wedge technology to consistently provide accurate contacts. The Palodent Plus EZ Coat Matrices have a micro-thin, nonstick finish that, according to the company, makes matrix removal easier. Also, greater matrix curvature helps to improve the anatomical accuracy of the restoration and avoid interference with the ring during placement.

For more details, you can visit www.palodentplus.com or call (800) 532-2855.

Dental marketing in 2013: Your website is your smile

By Patrick Goodness, CEO
The Goodness Company

In a recent survey conducted by www.match.com, more than 5,000 American single adults, both male and female, were asked how they judge members of the opposite sex for attraction and compatibility. Seventy-one percent of women and 58 percent of men rated the smile as the most important attribute for measuring attractiveness.

For those in the dental marketing industry, this report comes as no surprise. Additional support for the importance of a beautiful smile comes to us from a survey by the American Academy of Cosmetic Dentistry (AACD).

This survey concludes that nine out of every 10 adults in the United States consider an attractive smile to be an important social asset and eight out of 10 believe that an unattractive smile makes a person less appealing to the opposite sex.

Is your website’s first impression attracting the right patients?

It is clear that a beautiful, white smile is critical to overall attraction and to making a successful first impression. But in the world of dental marketing, how important is your dental clinic’s website in making the critical first impression and to attracting the right patient?

According to Dr. Hong Sheng, who conducted an in-depth eye-tracking research study at Missouri University of Science and Technology, it takes a website user less than two-tenths of a second to form a first impression when viewing a website and only 2.6 seconds for a user’s eyes to land on an area of a website that impacts his or her first impression.

What draws the most attention on websites?

According to the study (Science Daily: Feb. 15, 2012), the website locations that impacted the most attention of study participants designed dental websites as their primary tool for gathering information and contacting a vendor for purchases. In today’s Internet-savvy marketplace, the failure to have a high quality, professionally designed dental website, filled with critical content is a failure to reach almost 90 percent of your target market.

Invest in your online smile

Time and again I hear dentists telling their patients the importance of quality dental work and the value of investing in the best dental care for future health and happiness. Yet, a cursory review of thousands of dental practice websites across the U.S. reveals a surprising lack of investment in quality dental website design, dental branding and informative dental procedure content.

In short, the dental industry’s online smile is a bit stained and missing a few teeth.

As a dentist or dental clinic owner, your success in the increasingly competitive dental marketplace is predicated on your ability to communicate with potential patients about what makes you different and most importantly what makes you better than your competitors. This is a valuable element of results-driven dental practice marketing.

Build a patient base that knows you, likes you and trusts you

An investment in quality branding and website development for your dental practice is critical to building patient base that knows you, likes you and trusts you. That’s the foundation of health care relationship marketing.

The AACD reports that nearly half of all participants surveyed said they would like to make some improvement in the appearance of their smile. If your brand is out of date, your website needs a makeover or it’s time to rethink your marketing approach, seek the advice of a professional dental marketing agency to help you craft a dental marketing plan that delivers results and will prepare your practice for years of success.

If you’re not convinced that this article applies to you, please take an honest look at your logo, website and marketing materials and ask yourself, “Would I be impressed with my first impression?” It’s never too late to make an improvement to your online smile.
