ParaPost Taper Lux

Translucent Esthetic Post System
Collène Whaledent

New from Collène Whaledent, the latest addition to the previously successful ParaPost Lux range, ParaPost Taper Lux which has been specifically produced to provide the dentist with a post that fills closer into the canal with a crown-down greater taper file technique. Thus tapered post is better suited for narrow, thin root canals that require minimal amount of tooth structure removal during preparation of post space. The translucent fiber resin material in ParaPost Taper Lux eliminates shadows, transmits polymerization light for fast cementation and the unique rounded head design reduces stress points and locks in core material, also with retention ledges and tapered in apical third (.04) to match rotary tapered canal preparations. ParaPost Taper Lux is radiopaque, readily removed and adheres to standard ParaPost sizes in a colour-coded system.

Simplify Your RCT with R&S from Dental Sky

The R&S range of endodontic instruments are market leaders in Europe and with Dental Sky as the exclusive UK distributors they are sure to be a success in this country.

Being high quality, R&S endodontic instruments bring reliability to all of your endodontic work. The useful R&S EndoAccess Nickel-titanium instruments provide easy access by widening the coronal third. With a non-cutting tip to avoid damage to the canal R&S EndoAccess Nickel-titanium instruments help to simplify the introduction of endodontic instruments.

R&S Cat Files have been shown to be stronger and more flexible than regular K-files due to the square cross-section of the instrument. These stainless steel files move smoothly through the canal establishing a glide path in the canal for successive shaping.

The 21mm R&S Nerve Broaches are available in a range of sizes from 15-60 in pack of 12 instruments; all colour co-ordinated to allow for easy identification.

To see the full range of R&S Endodontic Instruments or further information please contact Dental Sky on 0800 294 4700.

Quality Endodontic Distributors Ltd

NEW HotShot™ Cordless Backfill Obturation Delivery Device

The revolutionary i.Pex offers a major advancement over traditional methods, by enabling you to accurately measure the length of the root canal in all conditions, including dry, wet and even gutta-percha can be automatically selecting the best possible frequency to suit the prevailing clinical condition, i.Pex makes a significant contribution to safer interventions and patient comfort.

Predictability is assured with i.Pex’s large LCD display and audio signal. Offering you clear visibility and simple operation at all times i.Pex instantly provides accurate information for safer, more precise root canals.

Using this reliable apex locator can increase your confidence when performing complex endodontic treatments, helping you offer patients the definitive clinical result.

To experience the world’s most advanced digital endodontic treatment solution please contact Jane White at NSK on 0800 054 1909 or your preferred dental supplier.

Quality Endodontic Distributors Ltd

NEW Light Speed LSX™ & SimpliFill®

The perfect combination

QED are pleased to announce that they have become the sole UK distributors for the NEW HotShot™ Cordless Backfill Obturation Delivery Device.

QED are to announce that they have become the sole UK distributors for the NEW LightSpeed™ and SimpliFill® instruments.

They are sterilised by gamma irradiation which enables them to be used straight from the pack, reducing the risk of cross contamination in the surgery as well as cutting down time, hassle and money spent on sterilising them before use.

The existing DENTSPLY brands which will now be pre-sterilised and provide a perfect matching plug obturator.

Quality Endodontic Distributors Ltd

QED

The answer to all your endodontic questions

Quality Endodontic Distributors Ltd are originators of the innovative triniti® Nickel-Titanium Instruments and SteriFiles®, both supplied sterile and individually blister packed because it has been scientifically proven that it is impossible to adequately clean and sterilise Endodontic Instruments after use.

They have an innovative cross section which is an “approximate equilateral spherical triangle”. This convex triangular cross-section allows more free space for debris removal. Whilst retaining its core strength, it also allows excellent flexibility and maintains a perfect cutting edge.

Pre-sterilised K and H Type SteriFiles® are sterilised by gamma irradiation and individually blister packed. They are very well suited to high-grade stainless steel, which maximises both flexibility and strength. The K Type files feature an enhanced non-cutting tip, they are the first choice for preparing curved and narrow canals.
