Inaugural Study Club Event
The British Association of Cosmetic Dentistry is pleased and excited to announce the inaugural Liverpool Study Club Event.

Taking place on Wednesday 21st April 2010 at the New Century Hotel, Liverpool.

Becoming a Fellow of the BACD
The British Academy of Cosmetic Dentistry (BACD) is committed to promoting clinical excellence through education and professional development.

For those considering submitting cases for examination, the deadline is 7th October.

The Fellowship is open to accredited members who have either published a scientific article on a clinical subject related to cosmetic dentistry in a peer-reviewed publication, or have given a postgraduate lecture at BACD meeting or national / international conference.

Benefits of Fellowship status include use of the title “Fellow of the British Academy of Cosmetic Dentistry” a plaque acknowledging instruments which will be superior to the Accreditation plaque, and use of the approved Fellow logo.

For more information contact the BACD on 0207 612 4166. Or info@bacd.com

Genus turns great expectations into stunning results

State of the art, striking interiors create a positive impression and inspire confidence in your patients. Genus’ acclaimed Design and Build programme captures the patient’s unique vision for their practice and makes it a reality by transforming it into a stylish, functional environment.

Genus prides itself on its flexibility. Without being bound to a particular manufacturer it offers knowledgeable, independent advice to all its clients and always gives the extra mile in customer satisfaction and service.

Worried about budgetary constraints? Genus fosters a partnership-driven approach through its new Best Practice Workshops, designed to foster better communication amongst dental professionals, identifying risk factors and implementing improvements. This has already produced project savings in the excess of 15%

Using the very latest in computer-added design and 3D software, accurate provision of the finished product improve clarity and avoid any misunderstanding.

For a stimulating, unique, stylish and cost-effective solution to suit the dentist’s individual needs Genus should be your first port of call.

For more information please call Genus on 01752 840948 or email chris.dawson@genus.co.uk or visit www.genus.co.uk

UCL Eastman Certificate in Endodontics commences in October 2010

Designed for dentists seeking to enhance their endodontic knowledge and clinical skills whilst continuing to work in practice, the UCL Eastman Certificate in Endodontics will run for four months, from October 2010.

This part-time modular programme will be delivered by respected clinicians and teachers both from the Eastman and internationally renowned experts.

As well as seminars and lectures, there will be practical sessions in the state of the art laboratory, using the latest instrumentation. Participants will also experience current endodontic and antimicrobial casework.

Topics to be covered will include: - Pulpal and periapical pathology - Endodontic diagnosis - Treatment planning - Endodontic pain management - Modern instrumentation and obturation - Endodontic digital imaging - Practice management and business skills - Endodontic infection control - Root canal failure - Traumatic injuries to teeth - Innovations in endodontics - Non-vital bleaching.

This leads to the award of a UCL Eastman Certificate in Endodontics through examination.

For further information or to register, please contact the Endodontic Courses Administration on 020 7950 1285 or email cinda@eastman.ucl.ac.uk or visit www.eastman.ucl.ac.uk/epd

Kemdent recover the 3 B: Recycle, Reduce, Reuse

Practitioners and Dental Practitioners who have immediate access to dental supplies can save up to 25% by recycling, reusing and reusing their tubs.

The new versatile range of Kemdent named Kemdent `Slimline` inserts is available.

The Slimline® range allows maximum savings in subgingival scaling because of its right, left and angled tips. The Kemdent® `Slim` is a single use disposable insert available in either a 30° or 45° angle. It is available only to practitioners who meet certain criteria to ensure an excellent standard of professional behaviour.

Understanding and offering a service to patients who suffer with dental phobia will enable patients’ access to better oral health treatments, and another reason to come to your practice. Promoting that the fact a patient is understanding, and offers a tailored service for nervous patients will not only improve all patient-practice relationships, but also encourage nervous patients to face up to their oral health, and help them conquer their fears.

For more information about Dental Phobia Certification or for placement on the dental/phobia directory visit www.dentalphobia.co.uk

www.dentophobiacertificates.com

The lecture, entitled ‘3D Treatment Planning: 10 Steps to Predictable Guided Implantology’ will be exploring the potential for guided surgery in implantology, using 3D technology to guide the dental implant placement and the execution of complex treatments to consistently high standards.

The high and final stage of the BACD’s Career Path in Cosmetic Dentistry, Fellowship is aimed at those achieving an advanced level who are also sharing their knowledge with the rest of the profession.

For those considering submitting cases for examination, the deadline is 7th October.

The Fellowship is open to accredited members who have either published a scientific article on a clinical subject related to cosmetic dentistry in a peer-reviewed publication, or have given a postgraduate lecture at BACD meeting or national / international conference.

Beneath the Fellow logo.

For more information contact the BACD on 0207 612 4166. Or info@bacd.com

Dentomycin: An Effective Adjunctive Treatment for Gum Disease

Dentomycin Periostat Gel from Blackwell Supplies is an effective treatment of moderate to severe chronic adult periodontal disease, when used in conjunction with scaling and root planing.

Supplied in easy-to-use, pre-filled applicators that allow the delivery of the gel directly into the periodontal pocket for immediate effect, Dentomycin binds to the tooth’s surface and is released closely to attack the bacteria causing periodontal disease.

The combination of SFP and Dentomycin can reduce pocket depth by an average of 42% in just 12 weeks , whilst the anti-inflammatory effect and the inhibition of destructive collagenases help promote connective tissue attachment.

Dentomycin Periostat Gel from Blackwell supplies a cost effective and proven method of enhancing periodontal treatment.

Since keeping gums healthy is an essential factor for overall health, Blackwell has created a leaflet offering advice and guidance about preventing and treating gingival problems, ‘How healthy are my gums?’ and help! Advice on your tray! is available free to all practices and patients.

For more information please call John Jesshop of Blackwell Supplies On 0207 224 1457 or fax 0207 224 1694

For more information please call 01082 840484 or email info@bacd.com

.......

ProTaper – Cutting edge technology, perfect for daily practice
ProFil® Universal H111z Nickel has combined speed, quality, simplicity and safety for shaping of root canals with both rotary and file hand

Upgrade to the healthier multi-tapered shape of ProFil and wrench, to help you achieve excellent clinical results.

Economics: (less files compared with other systems) In the majority of cases, only 3 files are required to effectively shape a root canal, increasing speed of procedure, therefore reducing the cost of time and effort. ProTaper SuperPro is also available as a multi-tapered system with variable apical taper, which increases the prosthodontic and aesthetic options available.

For more information please contact your local representative, Freephone 0400 000 327 313 or visit www.dentsply.co.uk

DENTSPRO Endodontic Procedural Team – Raising the standards of root canal treatment
Since the fundamental goal of endodontic treatment is the elimination of bacteria from the tooth and treating the disease process, starting with the placement of an appropriate root canal filling, modern treatment offers a much better chance of a successful outcome.

The Ray-Pex® 5 apex locator is indispensable for length control where radiographs are often unhelpful.

Since the advent of nickel titanium files, instrumentation has become quicker and easier DENTSPLY’s ProFil® SystemTM universal rotary and hand files, chosen by most dental professionals, permit the rapid and safe shaping of root canals. To give your patients the best possible endodontic treatment from isolation to obturation requires DENTSPLY quality at every step.

For more information please contact your local representative, Freephone +44 0800 072 3313 or visit www.dentsply.co.uk
