News in brief

Dentistry fraud
A dentist has been jailed for fraud after he was found guilty of falsely charging the NHS £10,000. Geoffrey O’Sullivan was sentenced to four months’ jail yesterday at Chelmsford Crown Court, charged with defrauding the NHS of £10,000 through eight cases of billing fraud. After an investigation by NHS Counter Fraud, O’Sullivan has repaid the money to the NHS and now faces a disciplinary hearing by the General Dental Council. He made more than 400 false claims for treating NHS dental patients, at his Princes Lane Dental Surgery in the Essex village of Dedham. Head of the NHS CF Dental Fraud Team, Stephen McKenzie, said: ‘People who provide medical and dental treatment to our children are rightly expected to have the highest integrity. This case is a reminder that dentists are being monitored and, if they do commit fraud, can expect NHS CF to pursue all available sanctions against them.’

Swine flu guidelines
Dentists in Wales have been issued guidelines from the Welsh Assembly on how to provide dental care to patients in the case of a swine flu pandemic.

Dentists are advised to contact patients at least 24 hours before their appointment to make sure they are symptom free. The guidelines also suggest as a routine, where facilities exist, all patients should be actively screened for symptoms of influenza on entry to the practice and before they enter the waiting room or clinical area.

Patients may defer routine dental care until after the pandemic, contacting the practice only for pain relief or other emergency treatment.

InSafe award
The InSafe Needlestick Protection System has won the Product Innovation of the Year Award at the Dental Awards ceremony, held at the Royal Lancaster Hotel in London. Judges were impressed by the comprehensive development programme behind the system, which makes it the first complete solution to the problem of needlestick injuries in dentistry.

Swine flu hits dentistry
The Department of Health (DH) has issued guidance to dental practices on what to do if the swine flu outbreak turns into a pandemic.

As Dental Tribune went to press, 52 people in the UK had been diagnosed with swine flu, according to the DH.

A spokesperson for the DH said: ‘It is right that we are preparing for the possibility of a global pandemic. The UK’s arrangements are continuing to ensure that we are well placed to deal with this new infection.’

Laboratory tests are currently being carried out on 590 other people who may have the H1N1 virus, said the Health Protection Agency. Symptoms of swine flu include fever, cough, headache, sore throat and aching muscles and joints. People are most infectious soon after they develop symptoms. Transmission is through close contact with an infected coughing or sneezing person.

Dentists are being warned that fewer patients will attend a dental practice for treatment during a pandemic as illness and anxiety will encourage patients to cancel or delay appointments.

But some patients both well and infected will need dental treatment. All patients should be screened for symptoms of flu before attending the practice by telephone and again on arrival at the practice, said the DH.

Treatment of infected patients should be limited to pain relief and should avoid aerosol-generating procedures where possible. Infected patients should be segregated from well patients. Ideally, practices and clinics will be identified and equipped (in consultation with the primary care organisations) to deal with infected patients. Where infected and well patients are seen at the same practice, a separation by space and/or time is essential.

Good general hygiene measures will be of prime importance in containing the infection. The DH recommends that an adequate supply of tissues, waste bins and hand cleaning facilities must be readily available.

Standard infection control procedures must be adopted for all patients (infected and well) and should include hand hygiene. PPE (with FFP3 respirators for patients with flu), decontamination of equipment and environment, and the safe disposal of waste.

Uniforms should not be worn outside of the practice and be taken home in a tied plastic bag for laundering. Protective plastic aprons are recommended to limit contamination of clothes. Staff within the practice will also be affected by a pandemic. The DH estimates that up to 35 per cent of staff may be absent for two to three weeks as a result of illness, caring for dependants, bereavement and transport difficulties. Many practices will have difficulty in maintaining their normal level of service. It warns that in England and Wales dentists may fail to deliver their contracted number of Units of Dental Activity.

The guidance recommends that contractual payments continue with no penalties if providers have done everything within their powers to comply.

Smile campaign
National Smile Month is back, and it’s bigger and better than ever with brushathons and competitions running on both sides of the Atlantic.

Cancer walk
The Mouth Cancer Foundation is calling on people to take part in a giant sponsored walk to raise much-needed awareness of mouth cancer.

Decisions, decisions
So you’ve done all the hard work in building up a pension pot, but converting this to income will be a crucial financial-planning decision.

Denture tips
To charge properly for a complete denture, a thorough examination needs to be carried out and not just for clinical reasons.

TePe® Because we understand that one size doesn’t fit all

TePe® Original and G2

Available in eight colour coded sizes (0.4mm to 1.3mm) and two textures. Soft ends mean easy to select the correct size for the majority of interdental spaces.

TePe® Extra Soft

Available in eight colour coded sizes (0.4mm to 1.3mm) and two textures. Softest tips mean easy to select the correct size for the majority of interdental spaces.

TePe® Medium filaments, these brushes are also suitable for use on implants and around sensitive areas.

Available in eight colour coded sizes (0.4mm to 1.3mm)
