DENTSPLY\textsuperscript{TM} FlexiSence® “Get your hands on the most successful instruments”

It is good to know that DENTSPLY\textsuperscript{TM} FlexiSence\textsuperscript{TM} range is such a success within the UK Endodont Market.

 Ergonomically designed with soft, grippy “animal hands”, FlexiSence\textsuperscript{TM} hand instruments fit perfectly in your hand, even with a wide grip at the working end and a narrow canal, the dimpled design helps stop hand fatigue and provides extra control and grip.

The range includes a selection of scalers, curvets and hoes, including a number of instruments also available with thinner tips – “allowing for finer work.”

FlexiSence\textsuperscript{TM} tips are replaceable, so should one break or be over sharpened, they can be easily replaced. Similarly, the handles can be bought separately, allowing you to fully colour-code your surgery.

For a limited time DENTSPLY\textsuperscript{TM} is offering a promotion on FlexiSence\textsuperscript{TM} hand instruments; buy 5 and get 1 free (copy insert to DENTSPLY\textsuperscript{TM}, please see web site for address).

The whole range is available to view online at www.dentsply.co.uk, or for more information, book an appointment with your local DENTSPLY\textsuperscript{TM} Product Specialist by calling 0800 072 3310.

SIRLaser Laser Aids set new standards of light and flexibility

Today the SIRLaser Advance offers a fast and effective way of removing your patients’ caries. With a wide variety of treatments such as amalgam, resin and composite as well as Surgery applications the new diode laser, due to its precise power setting offers even greater flexibility than ever before.

The SIRLaser Advance also allows you to store information about individual users as well as individual treatment sessions. Patient data can be easily transferred to patient records via a convenient USB Flash-drive.

GDPs looking for an ethical, safe and simple way to offer patients short term restorations.

SDR perfectly complements other products in DENTSPLY’s comprehensive range of treatment, even attempting this folly. Consequently the risk of mix up and stock errors has been reduced, and in addition the cost of maintaining stock has been reduced.

SteriFiles\textsuperscript{®} are designed for conventional endodontic instrumentation. Supplied in K and H Type presentations they are manufactured from high-grade stainless steel, which maximises both flexibility and strength. The K Type file features an enhanced non-cutting tip, it is the first choice for preparing root perforations.

It has been scientifically proven that it is impossible to adequately clean and sterilise Endodontic Instruments after use. The time saving of not having to re-cut and re-sterilise is of immense concern to the profession.

SteriFiles\textsuperscript{®} are designed to help endodontists. Supplied in K and H Type presentations they are manufactured from high-grade stainless steel, which maximises both flexibility and strength. The K Type file features an enhanced non-cutting tip, it is the first choice for preparing root perforations.

Future dentist given the full treatment “Everyone wants a beautiful smile and breathing is the simplest way to start motivating patients,” was the straightforward advice Dr Mani Bhardwaj BDS – Principal Dentist for The Smile Studios Dental Spa in Richmond – recommended for his audience to get their future patients. Dr Bhardwaj was at Barts and The London School of Dentistry and Medicine speaking to final year dental undergraduates about how to educate patients about their dental hygiene and care.

Dr Bhardwaj’s series of talks supported by Philips and for the BDA are designed to give future dentists some useful advice about how to get into the commercial realities of dentistry and the importance of practice retailing as a way of offering the best possible service to patients, ensuring that they sustain their visits to the dentist at all times. The speaker showed that promoting dental products does not mean that the dentist has to feel or act like a salesperson.

More information about The Smile Studios Dental Spa in Richmond can be viewed at www.themistledentistry.co.uk. The practice also launched a quarterly online magazine which can be viewed at www.unifmimagazines.co.uk.

More information about Smarthead is available on www.smarthead.co.uk and by calling 0800 0017 222.

SMARTEASE IS NOW MORE RADIO-OPAQUE! Smarthead, the creator of innovative endodontic systems, is delighted to reveal its new radio-opaque systems.

About the new system: The team at Smarthead has created a fully radio-opaque hydrophilic polymer based pulpectomy product. This product has been developed following feedback from practitioners who said they found smartseal easier and quicker to use but requested the product be more radio-opaque so as to be more consistent with other products. This is likely to be supported by orthodontists and general dental professionals at the BDA’s British Dental Conference and Exhibition in Liverpool on December 2.

Jerry Watson, Chief Executive of Smarthead, says, “We have been working very hard to meet the dental professionals’ expectations regarding radio-opacity and are thrilled to launch this product, as this is exactly what they have been asking us for.”

Procise laser on CCADS course

On the recent California Centre for Advanced Dental Studies (CCADS) course in Bournemouth, delegates were instructed on the use of the Valpes super compact Picasso Diode Laser.

Director of training at CCADS trains local clinicians on smile design with mentor instructors working closely with the Picasso.

The Picasso laser contains two lasers: a 7 Watt (laser power) Gallium Aluminium Arsenide (GaAlAs) diode laser and a super pulse, super short pulse, super compact Picasso Diode Laser. The laser is ideal for soft tissue (gum) work – as it does not interact with teeth or bone (BisGMA). It is particularly indicated for both procedures as it is ideal for the treatment ofPX

Septodont General Manager Mike Cann has led the online development and believes that the new site better reflects the company’s ethos and key messages: “This represents a significant advance for Septodont in the UK, coming at a time when we are bringing many new products to market and continuing investment in the development of others. It is vital that our website effectively communicates who we are and our capabilities in working with dentists around the UK.”

We hope you will enjoy surfing the site. Your comments and suggestions are most welcome, through the site’s “contact” facility. For more information about Septodont and to see the new website please visit www.septodont.co.uk.

Tavao – Top Quality Guaranteed Looking to transform your practice into a modern, comfortable environment for both staff and patients? If so, then look no further than Tavao.

Tavao uses quality materials in a creative way allowing practitioners to present a surgery that reflects a highly modern and professional approach to patient care.

The new Nitto Range is a favorite of Tavao’s innovative design of cabinets, illustrating how practical and creative they are. The cabinets are designed to create storage that always maximizes even the most limited space. Combined with the stylish Y glass work surface, the surgery becomes a comfortable and relaxing space to work in.

Tavao uses quality materials in a creative way allowing practitioners to present a surgery that reflects a highly modern and professional approach to patient care.

Snappy Half Price Special Offer Diamond Snappy laser is a portable, handheld device, offering the latest in endodontic therapy, sterilizing the root canal in a fraction of the time. Snappy is easy to use and to maintain, making it an attractive option for those who are new to the profession. Snappy’s high speed setting is due to a more reactive acid-base reaction. Diamond Snappy also maintains a superior compressive strength for a long time making it amazingly wear resistant and durable.

Genius takes ideas and turns them into reality

If you have a vision of your perfect practice, Genius can make it a reality. The Design and Build programme from Genius develops the dentist’s dream into a reality, enabling the dentist to be in control of their practice vision and help them to achieve their goals of time and money.

A committed specialist works with the dentist, developing and measuring the project whilst keeping the client informed within all new and existing industry guidelines. Using the latest in CAD and 3D software, Genius’ designers provide accurate measures of the finished project, creating a greater understanding for the dentist and staff.

By not being bound to one manufacturer, Genius is able to source from different suppliers ensuring that the dentist has the best of both worlds. A single product with a range of features to enhance the practice. Genius delivers independent advice and gives the extra mile to help the dentist’s practice.

Everyday Genus designs a practice from scratch is not easy. This is why Genus holds a partnership-driven approach, designed to foster better communication and problem solving, identifying risk factors and implementing improvements. This has already produced project savings in excess of £50,000.

For more information please call Genius on 01526 940444 or email chris.dawen@geniusgroup.co.uk or www.geniusinternational.co.uk

The NobelActive® represents a breakthrough in implant design with an expanding tapered body and built in Platform Shifting. Users will benefit from its long tapered design on the coronal portion and drifting blades on the apex for excellent initial stability.

For a one-off dental implant option, look no further than the All-on-4™ technique that allows practitioners to fix a fixed bridge on the same day as extraction. For practice managers the time saving and comfort.

NobelReplace™ for GDPs is the fastest growing product on the market. Its back tapered design on the coronal portion and drifting blades on the apex for excellent initial stability.

Superior strength and stability of interventional brushes.

NobelProcera™ allows practitioners to deliver the highest quality esthetics and root shape provides reliable initial root stability.

Kent Implant Studio builds ongoing relationships with referring dentists. Dentists looking for the very best in implant provision and care should look no further than Kent Implant Studio. At Kent Implant Studio, we are based in Northumberland Road, Maidstone. The team, led by the company’s founder, Dr Dattani, and his team have been in the field of implantology for many years. Dr Dattani is a member of the General Dental Council, a member of the Association of Dental Implantologists and the Association of Dental Implantologists. He is accredited with a Diploma in Implant Dentistry and an Advanced Certificate in Implant Dentistry (Bone Grafting) at the Royal College of Surgeons of England.

Dr Dattani and his team strive to build strong, ongoing relationships with referring dentists and are able to work on complicated cases such as sinus grafts, bone grafts and ridge extensions.

The team at Kent Implant Studio look forward to welcoming your patients to their new, state-of-the-art practice where they can expect to receive a highly informative and flexible service.

Superior strength and stability of interventional brushes.
