Putting things into perspective

Neel Kothari talks to Leo Cheng about the work of Christian dental charity Mercy Ships and how it’s providing many West African communities with much-needed dental care

Over the past couple of years, you will have read numerous articles outlining some of the day-to-day failures seen within the NHS (some even by myself, perhaps). While the difficulties have been much publicised, many of the things we get right are often forgotten and, dare I say it, taken for granted.

The advantages of the NHS are even more noticeable when looking at developing countries, where a lack of basic provisions often results in the spread of disease considered eradicated in the west.

Reaching out
Let me turn your attention to the work of Christian dental charity Mercy Ships, who provide free medical and dental care for countries who are not fortunate enough to have a system like the NHS.

Mercy Ships comprises of a fleet of hospital ships, which have been visiting developing nations since 1978 and are crewed by volunteers offering healthcare and other professional services free of charge.

Many people in developing countries have never had the opportunity to see a dentist. Dental care is almost non-existent in many industrialised countries worldwide, the most frequently seen oral diseases are dental caries and periodontal disease. However, unlike many countries, there are often the cause is put down to superstitious practices. Much of the advice given is based on local superstition and a real lack of healthcare access means that, for many, there is no option other than to take this advice.

In a recent report by the BBC, Humphrey Hawksley reported that, while billions of dollars of aid have been invested in programmes to modernise Africa, trying to observe Mercy Ships in action, the short time they were extremely difficult, due to their remote location, lack of medical facilities and financial constraints. Conditions that would be treated in the early stages in developed nations grow to the point of being life threatening in undeveloped nations; the consequence for many is a lifetime of disability and rejection.

Cleft lip and/or palate is a condition easily repaired in the developed world; however, cleft lip babies born in developing countries are often malnourished because they cannot feed properly. Children who do survive are often rejected because of their deformity. The statistics tell us that cleft lip and palate is the number one facial birth defect and the fourth most common birth defect overall, affecting 1 in 700-1,000 live births (WHO).

In the UK, cleft lip and/or palate is routinely treated at a young age, however, in West Africa it can be left untreated. In West Africa, superstition also plays an important role in how children with facial deformities are treated. I am informed that many children with this condition are kept hidden from view, rejected by friends and family, stoned if they appear in public and in some cases have been buried alive.

Promotional Price
from £3.50 per box

• The micro-textured surface ensures a good grip on instruments.
• The gloves contain no Natural Rubber Latex proteins to ensure that no Type 1 Immediate hypersensitivity reactions occur in individuals who are sensitised to Natural Rubber Latex.

Hydrophilic Impression Material
from £27.50 per pack (base + catalyst)

• Super hydrophilic, thixotropic – NO SLUMPING
• Convenient handling and easy to mix
• Exceptional dimensional stability
• Ample working time yet reduced setting time
• Soft on insertion in the mouth for greater patient comfort
• Easily removed from the mouth with optimum elastic recovery
• Excellent storage stability
• For best results use with Upisol Wash material

5 Feature
and end poverty, traditions such as secret societies and witchcraft are still deeply entrenched and often pitted against what the West is trying to achieve there.

If you are interested in learning more about the work provided by Mercy Ships, please visit www.mercyships.org.uk, where you will be able to find a plethora of information and some truly heartwarming stories about some third world citizens not lucky enough to have access to proper health care, let alone a national health service.

About Mercy Ships
Mercy Ships is an international Christian charity that provides free medical care and humanitarian aid to the poorest countries in Africa through its ship – the Africa Mercy. The Africa Mercy is the world’s largest charity hospital ship. It has a 78-bed ward with six operating theatres, x-ray facilities, a CT scanner and laboratory facilities. The surgeons on board perform operations on children and adults such as cleft lip and palate, cataract and crossed eye corrections, facial reconstructions, club feet and dental treatments. Entire communities have been changed through the provision of medical equipment and medicines, as well as water sanitation projects, and agriculture and construction training.

Over the last 30 years, Mercy Ships has worked in more than 70 countries providing services valued at £530 million and impacting about 2.5 million people.

The charity has treated more than 485,000 people in village medical and dental clinics, performed more than 47,000 surgeries and completed more than 1,000 community development projects focusing on water and sanitation, education, development and agriculture.

Who works on them?
The Africa Mercy is crewed by more than 450 volunteers ranging from surgeons and nurses, to engineers, cooks and agriculture. More than 450 volunteers range from surgeons and nurses, to engineers, cooks and agriculture. Sanitation, education, development and construction training.

About the author
Neel Kothari qualified as a dentist from Retall University Dental School in 2005, and currently works in Cambridge as an associate within the NHS. He has completed a year-long postgraduate course in implantology at UCL’s Eastman Dental Institute, and regularly attends postgraduate courses to keep up to date with current best practice.
