Aquasil Ultra does it again!

DENTSPLY’s Aquasil Ultra has been rated 5 stars for 2007 by REALITY once again. This is the fifth time in a row that Aquasil Ultra has been rated the #1 Impression material by REALITY!

In addition to the unmatched wettability and high tear strength of Aquasil Ultra, the availability of the Aquasil Ultra digiTM unit dose cartridges were some of the features liked by clinical evaluators. Aquasil Ultra delivers recordings of the thinnest margins and still remains intact when the impression is removed from the patient’s mouth. Moreover, the mint flavour makes the process of impression-taking a pleasure for both clinicians and patients.

With such expert endorse- ment, why wouldn’t you use Aquasil Ultra? It has been proven time and time again that Aquasil Ultra deserves a place in your surgery as one of your regular products!

For further information on the Aquasil Ultra range, please call Lindsey Bellamy on 0800 072 2515.

A Choice Of Impressions

UnoDent offers practices a choice of impression material. UnoDent Impreg, for example, is available in two consistencies and setting times. The material has low shrinkage properties and high thixotropy. Impreg is available in either addition cured (ac) kits or cartridges.

Impreg is non-toxic and bio-compatible in accordance with European regulations. Both putties and pastes are suitable for different applications: wash technique, double mixing etc. and are available in a range of colours to enable the user to customise impressions.

Alternatively, you might like to try UnoDent Exact, another high quality alginate material suitable for all impression tech- niques where alginates are indi- cated. It is rapid setting and is available in original (orange coloured with a neutral taste) or mint (blue with a mint aroma and taste).

As with all UnoDent products, quality and value are assured. If you would like to see just how good an impression you can make with either of these two materials call (0800 585596), fax (01576 500 583) or order electronically via the Internet (www.dental-directory.co.uk).

Elite HD+ Maxi – enhanced de- livery for mixing machines

Elite HDs. MAXI has moved away from the usual foil packag- ing of A-Silicones. The new hard plastic cartridge delivery makes the automatic mixing of A-silicones even easier. The 580ml ready-to-use cartridge drops straight into any ma- chine. Each contains more ma- terial than the old version (380ml x 302ml) and has 15 mixing tips with each standard pack. Elite HDs. Maxi comes in 5 viscosities - Monophase, Tray Material (heavy body) and Fatty. These premium quality Zher- mark materials will save you money on your current brand and incredibly are up to half the price of the leading brand. A limited number of sample packs are available.

Call 07870 690811.

Traditional Impressions Not Needed

Traditional time consuming and often messy impressions are no longer needed when you opt for the CEREC 5D CAD/CAM System. As we all know, impres- sions are not always 100% accu- rate, which can result in costly remakes, and patients do not of- ten enjoy the experience!

The CEREC System takes an optical impression of the prepa- ration and the antagonist, re- sulting in probably the most ac- curate impression you will ever have taken. To allow you com- plete control of the finished prosthesis you specify the posi- tions of the margins and the proximal contacts.

The CEREC 5D CAD/CAM System will help you to produce probably the best ceramic restorations possible. You will find the fit to be superb as the margin for error has been re- moved, the function, wear, durability and aesthetics of a CEREC prosthesis is second to none.

To find out how the Sirona team can directly support your practice and for a demonstration of the CEREC 5D system contact Sirona Dental Systems Limited on 0845 071 5040 or email: info@sironadental.co.uk. www.sironadental.co.uk

A Double achievement for Coltene/ Whaledent

Coltene/Whaledent demon- strated many years experience in impression technology with the introduction of the innovative Affinis impression range in 2001. AFFINIS provides outdoors surface affinity and bubble-free impressions. We now introduce AFFINIS PRE-

CIOUS, the next generation of wash materials, which has been further developed in three spe- cific areas.

Immediate wetting AFFINIS PRECIOUS shows spontaneous flow behaviour af- ter application, particularly on wet surfaces. This immediate and sustained surface activa- tion (hydrophilia) makes it pos- sible to achieve detailed im- pression results without bub- bles and voids.

Outstanding readability

The special matt silver and matt gold precious metal shades of AFFINIS PRECIOUS in combination with all AFFINIS tray materials provide ideal contrast and optimise the detail readability. This makes it quick and easy to assess the impres- sion result.

Relaxed application – faster impression

The polymerization proper- ties of conventional impression materials in the practice always represent a compromise. A short oral setting time means a short, “rushed” time for appli- cation. AFFINIS PRECIOUS has a clinical processing time of up to 60 seconds – plenty of time even for larger projects and the oral setting time is a comfort- able 120 seconds.

For further information call free phone 0500 295454 exts 225/224 or visit our website www.coltenewhaledent.com

Hydrogum 3 - 5 day stability alginate

Hydrogum3 is an alginate with a 5 day stability perfect for surgeries that post their impres- sions or don not have a Friday af- ternoon collection. Immediate Hydrogum3 has a fruity berry flavour which helps relax pa- tients and minimises discomfort with an extra rapid set in the mouth of only 45 seconds. Incred- ibly, Hydrogum3 costs no more than other branded alginate.

Samples are available or try an intro kit of 2 bags, con- tainer and measures for only £15.50 - call Zhermack on 07870 690811 or email uk@zhermack.com

Hydrogum5 - 5 day stability alginate

Hydrogum5 is an alginate with a 5 day stability perfect for surgeries that post their impres- sions or don not have a Friday af- ternoon collection. Immediate Hydrogum3 has a fruity berry flavour which helps relax pa- tients and minimises discomfort with an extra rapid set in the mouth of only 45 seconds. Incred- ibly, Hydrogum5 costs no more than other branded alginate.

Faster Impressions with GC Exafast NDS

The GC Exafast NDS family of addition curred silicones provide high quality, accurate and consistent impressions every time. Exafast NDS allows you to produce very smooth and highly precise impressions in only 2 minutes, thus improving your productivity and maximising the comfort of your patients.

GC Exafast Putty is an extremely fast setting putty material, ideally for use in the single step technique. In combination with other GC Exafast NDS materials its working time of 45 seconds and setting time of 2 minutes 15 seconds offers you the perfect combination of speed and precision.

With a high degree of elasticity, excellent tear resistance and good dimensional stability, Exafast NDS ensures that your impressions are perfect every time.

Dental Sky Will Impress You!

Choosing a new impression material is often risky, but you can be assured that RKS Turbodent from Dental Sky is the perfect A-silicone that provides exceptional detail reproduction. This complete range allows you to use your existing technique, be it the wash technique or double mixing.

The light bodied material is easily dispensed and does not slump even when placed in the upper arches. Having extremely high levels of hydrocompatibility, Turbodent impressions will always provide precise impressions even when in contact with gingival fluid and blood.

Should you prefer a C-silicone material, look no further than Turbosil. This dimensionally stable impression material provides superb contrast making your impressions easier to read. Turbosil is extremely economical without any compromise on the quality.

So, whether you choose your existing brand of impression material or would like to try Dental Sky’s cost effective Turbodent or Turbosil, call Dental Sky on 0800 284 4700.

New Virtual CAdbite Registration

The HydroSystem is a solution for reducing voids in A-Silicone impressions. This is achieved by reducing the surface tension on the preparation. HydroSystem is applied with an applicator and air dried prior to applying silicone around the preparation eg a Wash (light body) or Monophase (medium body). HydroSystem comes in a 10ml bottle with 50 flocked applicators. Priced at only £8 this is a welcome addition to enhancing impression taking.

Call 07870 680811 or email uk@zhermack.com for more information.

The British Society of Dental Hygiene and Therapy (BSDHT) in conjunction with the International Federation of Dental Hygienists (IFDH) would like to invite our colleagues from the international community to submit their abstracts to be considered for the ISDH to be held in Glasgow on 1 - 5 July 2010.

The theme of the symposium is:

*"Oral health – New concepts for the new millennium: new technology for preventing and treating diseases, including alternative treatments."*

Final selection of submitted abstracts will be at the discretion of The Scientific Committee of the BSDHT.

Submission of abstracts must be received by 20th November 2009

Notification of acceptance of abstracts will be provided by 20 February 2010

You may either send your nominations by post to:

Marina Harris President-elect BSDHT
5 Kestrel Court, Waterwells Business Park
GLOUCESTER GL2 2AT UNITED KINGDOM
Or via e-mail at enquiries@bsdht.org.uk
We welcome your support and participation.

From all of the BSDHT team.

The SIBEndo Pocket has been designed with optimum user-friendliness in mind. For example, it features an adjustable, easy-to-view display. The entire unit can be inclined by means of a lifter mounted on the base. The LEDs on the control panel are clearly visible to the dentist. The motor drive fits snugly into the sidemounted holder, which is removable for easy cleaning and disinfection. A beneficial side-effect: the holder mount functions as a convenient carrying handle.

The SIBEndo Pocket does not only indicate the approach of the apex visibly but also acoustically: The stylized representation of the root canal on the display and accompanying signals indicate that the file tip is approaching the apex. The volume of the apex signals is adjustable, as is the signal for counterclockwise rotation. The user can choose from various display languages and set the display contrast in line with his or her individual preferences. When using the Sirona ENDO 6.1 handpiece the dentist can locate the apex without a file clamp. This along with the compact dimensions of the handpiece’s head ensures an optimum view on the access cavity.

For further information please contact: Sirona Dental Systems 0845 671 5404

The SIROEndo Pocket combines many functions for root canal preparation, including the option to localize the apex. This streamlines treatment workflows. The SIBEndo Pocket is equipped with a storage battery and can also be operated during the recharging phase.

The SIROEndo Pocket's cost effective Turbosil is extremely high levels of hydrocomaptibility. Turbodent impressions will always provide precise impressions even when in contact with gingival fluid and blood. The user can choose from various display languages and set the display contrast in line with his or her individual preferences. When using the Sirona ENDO 6.1 handpiece the dentist can locate the apex without a file clamp. This along with the compact dimensions of the handpiece's head ensures an optimum view on the access cavity.

From all of the BSDHT team.
