The Complete Smile Academy
Facilitating world class education
Visit www.completesmileacademy.co.uk for 2010 courses

The Complete Smile Academy is at the forefront of implant and restorative dental education with internationally acclaimed programmes for dental professionals throughout the UK looking to extend their knowledge of dental implants and restorative dentistry.

The Academy is dedicated to providing dentistry and is the perfect environment to learn professional skills, with facilities including phantom head and high fidelity simulators. Workshops are held in state-of-the-art multimedia-supported facilities, including cameras to show live cases and technical demonstrations in great detail.

The team, led by Allen Branley, comprises technicians who are recognised for their high standards of patient care. Furthermore, a range of specialists and renowned international speakers in cosmetic dentistry and implants contribute to the modules and courses provided at the Complete Smile Academy. Courses on Implants, Occlusion, Smile design and Aesthetics are held throughout the year and the Complete Smile Academy aims for every delegate to receive an intensive and rewarding learning opportunity in a technologically advanced, supportive environment.

enhancing results with ease.

Two of the best selling flowable composites in the US are Danville’s StarFlow and Accolade SRO. StarFlow had the highest compressive strength in CRA testing and was found to be stronger than some “packable” composites. Accolade PV’s try-in paste and bonding composite are the same material, however the try-in paste has no light sensitive initiators, allowing accurate colour evaluation with nearly unlimited try-in time. Using a

The BDA Dental Showcase 2009 at the NEC in Birmingham was a great success for Purity Laboratories. With breaking attendance it was tried and proven event that gave us the opportunity to showcase the Beverley Hills Formula range. Using the motto “Upgrade to the healthier side of whitening and stop Gapsmiles before it starts” the innovative Beverly Hills Formula product range has created a lot of interest from dentists and dental professionals.

As severe tooth wear and erosion becomes a constantly increasing problem and consumers look for products that go beyond traditional attributes and which are offered by the Beverly Hills Formula range. All Beverly Hills Formula products have a unique combination of anti-bacterial agents, low abrasion and anti-stein surfaces to protect and whiten teeth. The toothpaste is proven to effectively remove tooth staining and offers maximum whitening power, whilst maintaining extremely low abrasion. Tests conducted by the BBC Watchdog programme and lab testing have shown the Beverly Hills Formula toothpaste removed 90% of staining.
