The images shown on screen can be electronically captured and stored for the benefit of the patient and clinician. The Durr Vistaproof fluorescence camera provides an innovative new technique for quickly and safely visualising caries. A powerful high-energy violet light shines onto the tooth’s surface causing’s micro-organisms within the carious lesions to emit fluorescence and become visible to the naked eye. The benefit over CCD also extends to its price; similar to a traditional two sensor CCD system but with a wealth of advantages over this technology. The new GlobalLED is a no-mercury, low cost, long-lasting light source that will eliminate the inconvenience of having light going during your procedure, saving you valuable time to treat the anterior, premolar and molar regions in one visit. CEREC™ also utilises a digital imaging technique to capture the data needed for tooth restoration. Combined with adhesive bonding technology, CEREC™ creates biocompatible, non-metallic, natural-looking restorations from durable high-quality ceramic materials in a single treatment session.

Education the focus at 15th Annual Scientific Meeting of the EAO

An impressive 500 dental professionals attended the 15th Annual Scientific Meeting of the EAO which was devoted to the theme ‘Crown & bridge: new solutions to old problems’. The event aimed to bring together dental professionals from around the world to discuss the latest developments in evidence-based research, clinical practice, and treatment strategies.

The meeting was opened by President of the European Academy of Osseointegration, Professor Catherine Wiesener, who welcomed participants and highlighted the importance of continued learning and innovation in dental care.

 Speakers included experts in various fields of dentistry, such as implantology, prosthodontics, and periodontology. The program included keynote speeches, interactive workshops, and poster sessions, covering a wide range of topics.

The meeting also provided opportunities for networking and collaboration among professionals from different countries and specialties. Attendees had the chance to exchange ideas, discuss challenges, and learn from each other’s experiences.

Overall, the 15th Annual Scientific Meeting of the EAO was a successful event that brought together dental professionals to advance the field of dentistry and improve patient outcomes.

Registration Now Open for Talking Points in Dentistry 2011

Registration is now open for this year’s Talking Points in Dentistry event, which will take place on May 25th and 26th at the RAC Conference Centre in London. The event is designed for dentists and dental professionals, providing a platform for discussion and learning.

Talking Points in Dentistry is a popular event that brings together dental professionals to discuss the latest developments in evidence-based research, clinical practice, and treatment strategies. The event is open to all dental professionals, regardless of their specialty.

The event will feature keynote speeches, interactive workshops, and poster sessions, covering a wide range of topics. Attendees will have the opportunity to learn from leading experts in the field, network with colleagues, and discuss challenges and solutions with other professionals.

For more information, or to register, please visit the Talking Points in Dentistry website. Registration is open until May 19th.

Clinicians immersed by SRD®

70 per cent of dental practitioners’ talking, ID®* (Smart Dentine Replacement), the first bulk-fill, flow composite innovation. Leave the material as self-cured or ‘good’ in a recent survey. The survey conducted during August – September 2010 provides evidence that clinicians are increasingly immersed with SRD® from DENTSPLY. A number of clinicians interviewed that “It does exactly what it says on the tin.”

After receiving their sample, clinicians enjoyed the versatility of SRD® which offers its unique simplicity and ‘superfast flow abilities’ Having only recently been launched in the UK, ID® is already being used by over a thousand practitioners across the country, as well as dentists throughout the world.

Thanks to its exceptional internal cavity integrity and reduced voids and air bubbles, SRD® has a significantly reduced risk of post-operative sensitivity. By delivering a superior new product, clinicians can enjoy a simpler and quicker experience when placing posterior direct restorations. Clinicians looking to save time and effort when placing Class I and II restorations should call DENTSPLY today to receive their free sample of ID®.
