Don’t get caught short

CB12 – breath rescue

When patients need help with bad breath, come to the rescue with a sample CB12 Microdice pack.

With its low concentrations of zinc, sorbate and chlorhexidine, CB12 neutralises the VOCs that can cause bad breath. And because it workssvg for up to 12 hours, it can offer sufferers release from the anxieties that may accompany this troublesome condition.

Available in a handy microdice pack containing one 10ml dose, CB12 tackles the cause of bad breath, rather than just masking the symptoms.

Easy to use and with a refreshing mint-menthol taste as well as added fluoride, CB12 Microdice provides an effective way for patients to experience the benefits of CB12 and relief from their symptoms.

Large enough for ease of handling, but small enough to be discreet and fit in the pocket, make CB13 Microdice the first line of defence against bad breath.

Come to the rescue now and order your supply of CB12 today.

For more information about CB12 Microdice and how it could benefit your patients, please visit www.medicopharma.co.uk or visit www.cb12.com

The Dental Directory – we’re more than just care...

When you’re looking for answers, you need a company who understands your questions.

When you’re looking for solutions, you need knowledgeable advice.

The Dental Directory has always been really useful, providing information on upcoming deals and new products. As such, I would recommend The Dental Directory to other practices.

We were looking to streamline our purchases, and with its extensive range, The Dental Directory made this possible. We find that all of their orthodontic products offer great value for money.

“We usually have a lot of interaction with our sales representatives, and they have always been really useful, providing information on upcoming deals and new products. As such, I would recommend The Dental Directory to other practices.”

From aesthetic brochures to BPI ortho-trips and aligner kit packs, The Dental Directory offers a vast range of products for your orthodontic needs. Discover the latest products and materials at fantastic prices today.

New product releases

Quicklase have released the new 3w laser that is ideal as an introduction laser and priced at only £2,495 inc vat and delivery! The 3w laser was used for day to day dentistry for basic procedures such as intrinsic, extrinsic and gingival recontouring for better fitting veneers and crowns, this is in addition to the standard procedures Gingivectomy, gingivaloplasty and implant recovery. Also available a 4w and the model as well as an 8w model, which is an 8nm and 10nm laser. In addition to soft tissue the Quicklase lasers are also used for teeth whitening and TMJ, the extra cost of the laser comes with therapy and aftercare training. Quicklase come with everything you need from patients marketing to online training. Quicklase are also the leading manufacturers of soft tissue lasers providing you local backup and support. This also means that they can offer the Dentalase lasers at any very competitive price. In addition to soft tissue the laser allows you to offer laser assisted dentistry and in turn making your surgery more profitable. Quicklase have also released under the quicklase brand the new “lasers forcbt, hand files, hand files, gutta percha, rotary files and paper point. Visit our website: www.quicklace.com/product/endo/ for more information on our endo products.

Diamond Snappy - The key to a successful appointment

Buy 1 pack of 10g/7ml Diamond Snappy Glass Insomer Restorative Composite FREE for the first 200 customers - offer is available until 31st July 2014

The key for Dental Professionals treating children this year is to find a restorative material that can be given valuable chair time without causing unnecessary discomfort.

Diamond Snappy: GC’s light-cured glass ionomer restorative is easy-to-handle and offers good, SIROInspect is better

The products in this range are designed to enable practitioners to treat carious lesions efficiently and effectively with minimum intervention cavities and fissure sealing.

But behaves like a restorative. Its indications are for direct restorations, intermediate cavity fillers and a homogeneous dispersion of fillers.

For further information please contact GC UK on 01908 218 999.

Dr Colin J. McPherson, Consultant Endodontist at The Dental Hospital, University of Manchester said: “EndoCare treatments in a warm and caring environment where patients’ needs are treated first. Our philosophy is simple: we aim to provide high quality Endodontic care, and very clearly - which areas are carious and which ones are not. The attending dentist can therefore see at first glance – and very clearly – which areas are carious and which ones are not. The attending dentist can therefore see at first glance – and very clearly – which areas are carious and which ones are not. The attending dentist can therefore see at first glance – and very clearly – which areas are carious and which ones are not.
